

How to use python

Our principles

- use python as soon as possible
- not for programmers, but for scientific calculations
- reduce complex properties

What is python?(How python different from C)

- No compile
- Not the later the better(3.7 or 3.8 is enough)

tips

- maybe use anaconda instead of directly install python?
- when installing, do not choose a install path with chinese or other special characters

What is IDE:

- pycharm
- visual studio code
- jupyter notebook
- notebook
- ...

(How to use anaconda)

how to run a python program
